12 Step Program to Help Get Your Lawn Off Drugs

1. **TOLERATE SOME WEEDS** and allow beneficial plants to exist such as clover for its nitrogen-fixing magic.
2. **DIG WEEDS BY HAND**, it's the best method of weed control.
3. **RESEED BARE SPOTS** before weeds fill them in.
4. **TEST YOUR SOIL**. Get a soil test kit.
5. **REMOVE THATCH**, the matted layer of clippings and debris on top of the soil, if it is more than 1/2" thick.
6. **AERATE THE LAWN** to break through the deep thatch and reduce compaction of soil..
7. **FERTILIZE NATURALLY**. If your soil test results show the need, add organic fertilizers.
8. **MOW AT THE PROPER HEIGHT**. Keep grass 2 1/2 to 3"
9. **LEAVE GRASS CLIPPINGS**. Less raking!
10. **WATER MORE DEEPLY & LESS FREQUENTLY**. Water only when soil has dried out well into the root zone.
11. **CONTROL PESTS NATURALLY**. Practicing natural lawn care will create a healthy lawn which is unattractive to pests.
12. **ENCOURAGE** earthworms and micro-organisms through these organic gardening steps.
